Experience

Senior Front End Developer at Intouch Solutions March 2010 - Present (6 years 7 months)

Responsibilities: I primarily develop for responsive websites. Building sites for our clients that either target internal training or consumer branding. We strive for modern development and build responsive to all popular devices (desktop, tablet, mobile). My focus is Front End, I build usually within .NET MVC frameworks, building page views with HTML/CSS utilizing Javascript for functional interaction. I'll also develop more complex Javascript tools, custom HTML video players, interactive database driven graphs/charts, questionnaires, Map API locators, and animations. A few of these utilizing Angular frameworks. As a lead Senior Developer I often establish the foundation build for new websites. Establishing source locations in desired repository (TFS, Git, SVN), setting up needed package or module tools (Node/NuGet - precompilers, Bootstrap, Modernizr, Require.js), working with Design/Creative to template web style guides, create styled HTML components, delegate and distribute multiple pages to other developers for content build.

Actionscript Game Developer at River Key Creative January 2010 - January 2013 (3 years 1 month)

Responsibilities: I built custom interactive games in Actionsript. These games were utilized in kiosks and/or sporting arenas. We specialized in sports marketing, and would often create the interactive games fans play on the jumbotrons at popular Stadiums.
